

# Arroyo Investment Group, LLC

The annual composite dispersion presented is an asset-weighted standard deviation calculated using gross returns of accounts in the composite the entire year. The 3-Year Standard Deviation represents the annualized standard deviation of actual gross composite and benchmark returns, using the rolling 36-months ended each year-end. The Volatility of the Composite as a Percentage of the Benchmark is calculated by dividing the composite 3-year standard deviation by the benchmark 3-year standard deviation.
